

## Financing LCD, Hungary, 2005

(values normalized to YL 30-49; preliminary)

## **Pending issues in the Hungary accounts**

1. Issues regarding private transfers are still pending.
2. Profiles seem to be oversmoothed, but not for long.
3. Macrocontrols are still not perfectly matching, but improved a lot through the week.
4. Some of the private asset incomes seem to be undetected, which triggers unexplained dissavings in old age.
5. Public transfers, labor income and consumption seem to be in good shape.
6. Once templates are fixed we intent to create full time series starting possibly from 1996 and potentially reduced time series going back further in time. If only we can go back somehow to the 1980s ... (with the accounts; not otherwise)
