June 27<sup>TH</sup> 2007

---

## Data sources:

**Primary:** FIES 2005

**Secondary:** NIPA 2004, National Health Survey (ENS) 2006

---

## Private consumption

### Private education

- Regression method
- Lowess smoothing
- Two estimations:
  - a) Regression on enrolled people (aged 5-38) and non-enrolled people (aged 0-4 and 39 and over)
  - b) Regression considering only enrolled people.

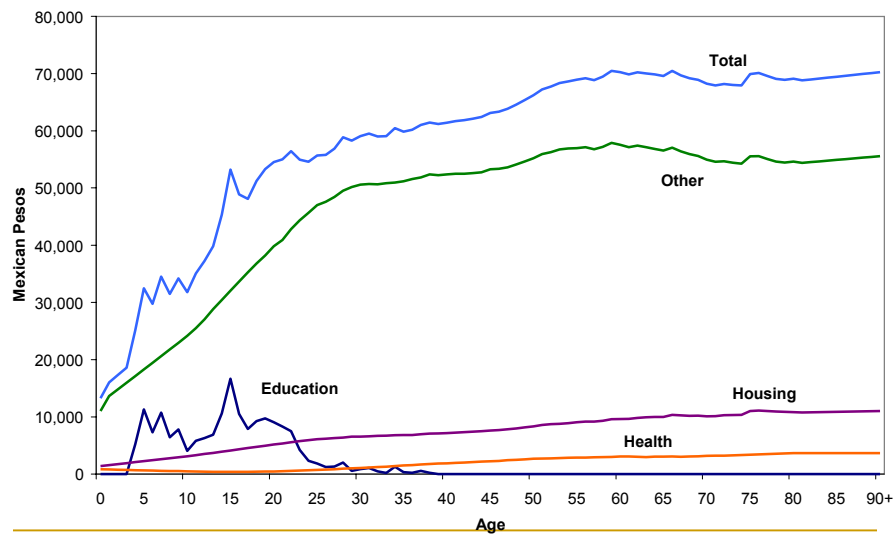

### Private health

- Regression method
- Lowess smoothing
- Allocation from data of hospital utilization provided by ENS-2006

### Private housing and private other

- Equivalence scale method
- Lowess smoothing

Per Capita Private Consumption, Mexico, 2005

## Public consumption

### Public Education

- Direct calculation
- Unsmoothed
- Data from UNESCO concerning share enrollment by level in 2004. Enrollment rates were estimated from FIES 2005. Adjusted to national expenditure in education from NIPA

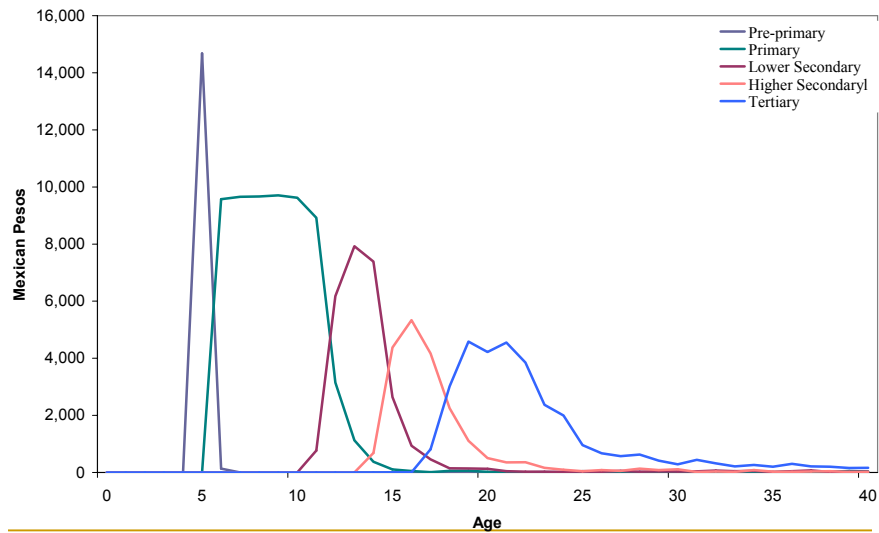

### Public Health

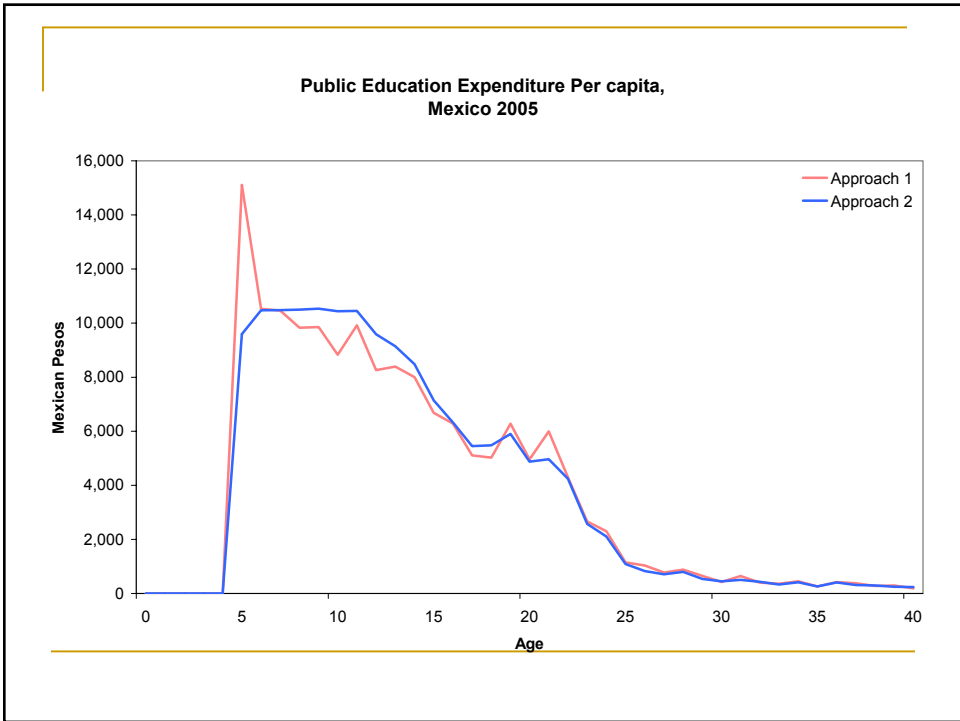

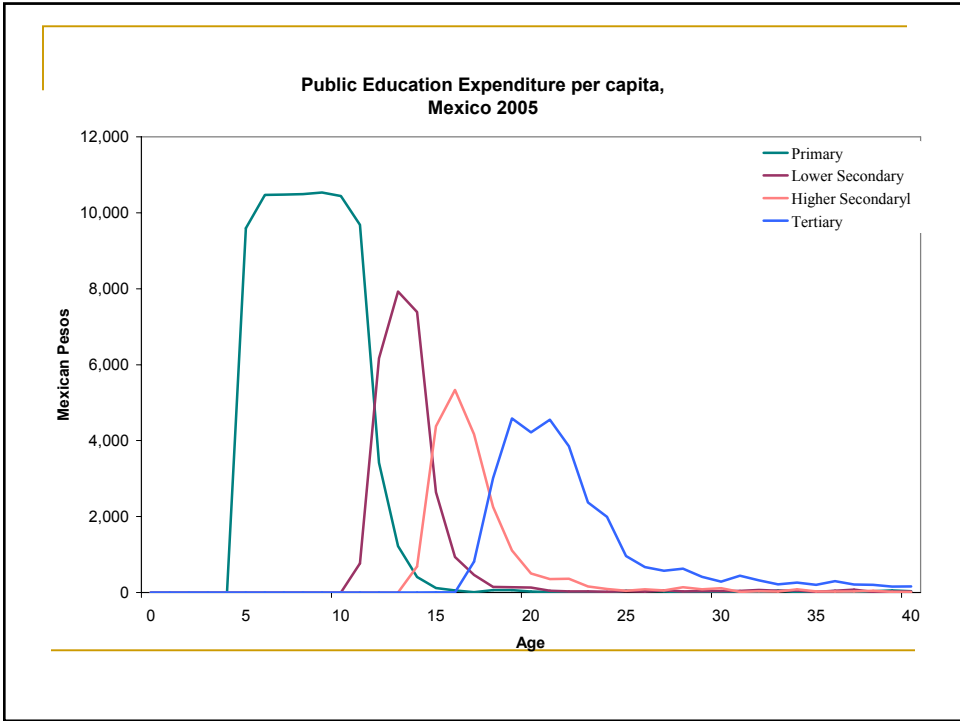

- We used the age profile from ENS 2006 to allocate the Government Health Expenditure by age. Adjusted to national expenditure in education from NIPA
- Unsmoothed

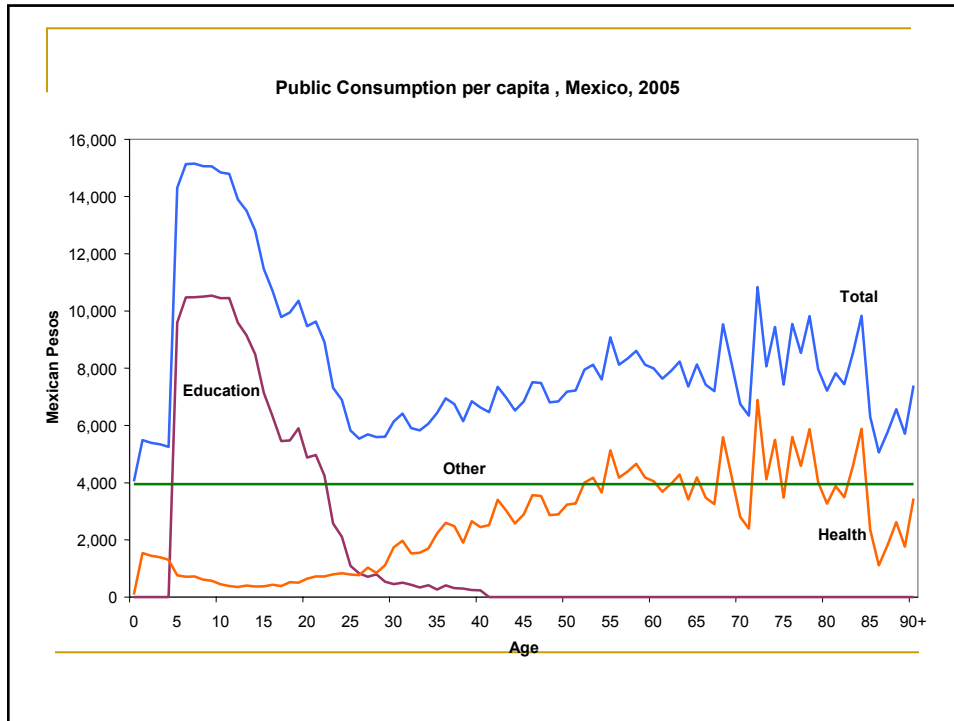

### Public Other

- We assumed mean expenditure for all ages. Adjusted to national expenditure in education from NIPA

Public Education Expenditure per capita,  
Mexico 2005

**Labor income**

**Earnings**

- Direct calculation from FIES 2005
- Lowess smoothing

**Self-employment labor income**

- Direct calculation from FIES 2005 (2/3 of individual entrepreneur income)
- Lowess smoothing
